

GreenClean® Pond Block

Beneficial Bacteria Treatment

GreenClean® Pond Block is a proprietary blend of naturally occurring aerobic and facultative bacterial strains and enzymes formulated to increase water quality and overall health of pond ecosystems.

The high counts of beneficial bacteria packed in each block were scientifically selected and tested under actual field conditions. The bacteria are stabilized and shipped in spore form, ensuring long term stability and extended shelf life. GreenClean Pond Block is completely nonpathogenic and contaminant-free.

BENEFICIAL ENZYMES:

Amylase: Digests carbohydrates

Lipase: Degrades fish waste, organic materials

Esterase: Breaks down fatty acids and glycerol

Urease: Breaks down urea

Cellulase: Breaks down dead plant material, leaves and grass clippings

Xylanase: Breaks down polysaccharides and cellulose

Protease: Breaks down proteins

KEY FEATURES & BENEFITS

- Non-toxic, ideal for aquatic life
- Easy-to-use, no license required
- Reduces organic debris accumulation on the floor and shoreline of ponds
- Reduces ammonia, nitrogen compounds and phosphate
- Effective over a wide range of pH and temperature conditions
- Contributes to better water quality and pond appearance

Contains naturally occurring, non-engineered highly stabilized Bacillus strains

cases include four 5-lb. blocks

HOW SHOULD GREENCLEAN POND BLOCK BE USED?

BioSafe Systems recommends GreenClean Pond Block in areas of water circulation. Water movement helps distribute the GreenClean Pond Block bacteria throughout the water column. A mesh sock is provided for monitoring the block dispersal and optimizing the location of the block placement by anchoring it to areas of circulation (aeration systems, fountains, culverts, shorelines, floats/bouys, ect.).

WHAT MAKES GREENCLEAN POND BLOCK SO EFFECTIVE?

The bacterial enzymes found in GreenClean Pond Block are specialized to break down the cellulose, proteins, lipids, carbohydrates and other compounds found in pond "muck". This muck is primarily responsible for murky water, foul odors, and increased nutrient levels in ponds. GreenClean Pond Block's powerful bacteria breaks down the organic material that contributes to pond muck and nutrient loading, raising water quality and pond appearance.

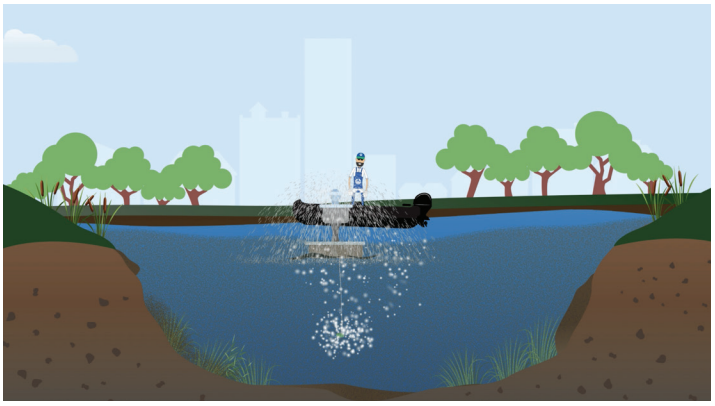
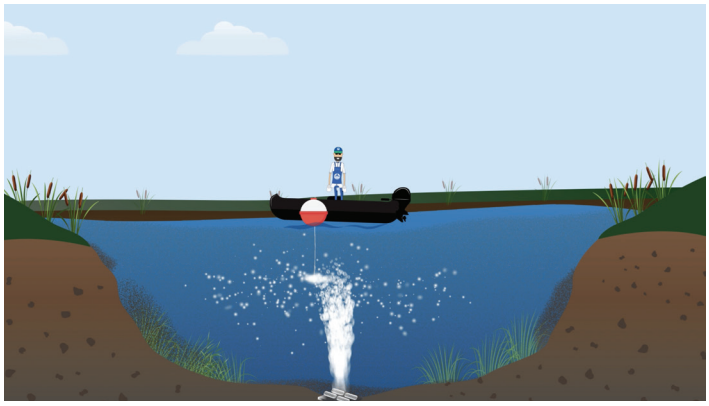
Application	Effective pH Range	Effective Temperatures
Apply in early spring when water temperatures reach 50°F or higher. For best results place in in area with water circulation. One block will treat up to 5 acre/feet of water for 30–60 days.	5.0–10.0	50°F–130°F

TWO WAYS TO APPLY GREENCLEAN POND BLOCK



FOUNTAIN DEVICE



AERATION SYSTEM
